SaFedon® Hygiene System Benefits:

Hospital acquired infections
One of the most common routes of transmission being through hands. Studies have shown that traditional glove dispensers, boxes and gloves frequently become contaminated due to the constant unavoidable touch of multiple users. Gloves can increase the risk of cross contamination and reduce the safety of both the wearer and the patient.

- SaFedon® gloves dispense cuff first, stop users from touching the glove's most critical surfaces: thumb, fingers and palm.
- SaFedon® interleaving technology ensures gloves are dispensed individually, 1 glove at a time, preventing the potential contamination of other gloves in the box.

SaFedon® Environmental Benefits:

- At source, less packaging is used than for equivalent standard gloves.
- SaFedon® ensures 100% utility of the product and eliminates glove wastage due to standard glove box dispensing.
- SaFedon® packing system allows more gloves to be transported and stored per cubic metre. This reduces CO₂ miles per glove during haulage.
- SaFedon® small compact format reduces cost and transport miles during recycling.

SaFedon® innovation is a prime example of our commitment to the future of the Disposable Glove Market for years to come.

Why is SaFedon® the most sustainable solution?

Better For the End User:

- Less waste, quick and easy donning that saves time.
- Cuff First dispensing reduces cross contamination by up to 96%.
- Up to 40% smaller than traditional packing.
- Up to 20% less packaging.
- Dispensing one glove at a time and always cuff first, making it easier to put on.

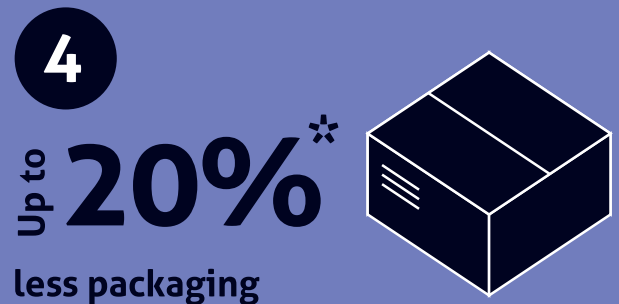

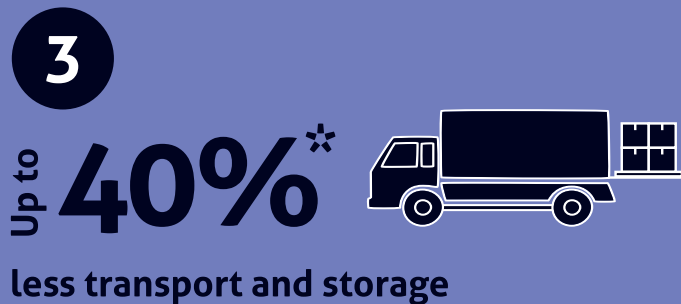

Better For Logistics:

- More cost and space-efficient, better storage and distribution.
- Up to 40% storage & space savings, so less warehouse space is required.
- Fewer deliveries required, meaning less admin & less distribution cost.
- Lower CO2 Footprint than competitors.

Better For the Environment:

- Smaller packaging = less cardboard = better for the planet.
- Recycled cardboard packaging, fully and widely recyclable.
- SaFedon ensures 100% utility of gloves and eliminates this wastage.
- Lower carbon footprint than traditional boxes.

The 4 key benefits of SaFedon® dispensing system.

* Percentage based on standard boxes of 100 gloves.
